

Cleanup Guide

Purpose

This document describes the cleanup steps required after completing the AWS CI/CD Pipeline Lab.

Cleaning up resources helps prevent unnecessary AWS charges and keeps the AWS environment organized.

Resources Created During This Lab

The following resources were created:

- Amazon S3 Bucket
- AWS CodePipeline
- AWS CodeBuild Project
- IAM Service Roles
- GitHub Repository (Optional)

Cleanup Order

To avoid dependency errors, delete resources in the following order:

CodePipeline

↓

CodeBuild

↓

S3 Bucket Objects

↓

S3 Bucket

↓

IAM Roles

GitHub Repository (Optional)

Step 1 - Delete CodePipeline

Navigate to:

AWS Console

→ CodePipeline

Select:

demo-pipeline

Actions:

Delete Pipeline

Confirm deletion.

Step 2 - Delete CodeBuild Project

Navigate to:

AWS Console

→ CodeBuild

Select:

demo-build

Actions:

Delete Build Project

Confirm deletion.

Step 3 - Empty S3 Bucket

Navigate to:

AWS Console

→ S3

→ aws-devops-demo-bucket-2026

Open:

Objects

Select all objects.

Click:

Delete

Confirm deletion.

Step 4 - Delete S3 Bucket

After the bucket is empty:

Navigate to:

S3

→ aws-devops-demo-bucket-2026

Click:

Delete Bucket

Enter bucket name for confirmation.

Delete bucket.

Step 5 - Delete IAM Service Roles

Navigate to:

AWS Console

→ IAM

→ Roles

Locate roles created during the lab.

Examples:

`AWSCodePipelineServiceRole-*`
`codebuild-demo-build-service-role`

Delete only the roles associated with this lab.

Note:

Do not delete shared or production IAM roles.

Step 6 - Remove GitHub Repository (Optional)

If the repository was created only for this lab:

Navigate to:

GitHub

→ Repository

→ Settings

→ Danger Zone

Select:

Delete Repository

Confirm repository name.

Delete repository.

Verification Checklist

Ensure the following resources no longer exist:

- CodePipeline deleted
- CodeBuild project deleted
- S3 bucket emptied
- S3 bucket deleted
- IAM roles removed
- GitHub repository removed (optional)

Expected Result

After cleanup:

No active AWS resources remain from this project.

The environment is ready for future labs without incurring unnecessary charges.

I'd save this as:

`docs/CLEANUP.md`

and keep your main `README.md` focused on the project overview, architecture, workflow, screenshots, and results.
